Use of pressure equipment according to its application:

All valves being installed in pipelines for shut-off and control service to prevent backflow and guarantee filtration incl. overpressure devices for gate valves within the admissible limits of pressure and temperature under consideration of chemical and corrosive influences on the pressure equipment. The application in fluid class 1 and fluid class 2 is admissible. The resistance of the valve to the medium has to be checked for the existing operating conditions.

We declare this pressure equipment to conform with Directive 2014/68/EU.

For the manufacture of this pressure equipment, the standard AD 2000 has been applied.
